

FCC Test Report

Report No.: NTEK-2016DG0815466E

Part 15 subpart C

Client Information:

Applicant: SHENZHEN UNICHAIN TECHNOLOGY CO., LTD

3 Floor, HongXiangJia electronic commerce Pioneer Park,Yang Mei

Applicant add.: ,BanTian Street, Shenzhen City

Product Information:

Product Name: Wireless Mouse

Model No.: M006

Derivative model No.: M002

Brand Name: N/A

FCC ID: 2AEFFM006

Standards: CFR 47 FCC PART 15 SUBPART C:2016 section 15.249

Prepared By:

DongGuan NTEK Testing Technology Co., Ltd.

Add.: 5/F, Building 11, Creative Industry Center Park, No. 34 Guantai Road, Guancheng District, Dong Guan, 523000, P.R.China

Date of Receipt: Aug. 06, 2016 Date of Test: Aug. 06~13, 2016

Date of Issue: Aug. 13, 2016 Test Result: Pass

This device described above has been tested by DongGuan NTEK Testing Technology Co., Ltd., and the test results show that the equipment under test (EUT) is in compliance with the FCC requirements. And it is applicable only to the tested sample identified in the report.

*This test report must not be used by the client to claim product endorsement by any agency of the U.S. government.

Report No.: NTEK-2016DG0815466E

Remark:

EUT: In this whole report EUT means Equipment Under Test.

Tx: In this whole report Tx (or tx) means Transmitter.

Rx: In this whole report Rx (or rx) means Receiver.

RF: In this whole report RF means Radio Frequency.

ANSI C63.10: the detail version is ANSI C63.10:2013 in the whole report.

2.2 Measurement Uncertainty

All measurements involve certain levels of uncertainties, the maximum value of the uncertainty as below:

| No. | Item | Uncertainty |
|-----|------------------------------|-------------|
| 1 | Conducted Emission Test | 1.20dB |
| 2 | Radiated Emission Test | 3.30dB |
| 3 | RF power,conducted | 0.16dB |
| 4 | RF power density,conducted | 0.24dB |
| 5 | Spurious emissions,conducted | 0.21dB |
| 6 | All emissions,radiated(<1G) | 4.68dB |
| 7 | All emissions,radiated(>1G) | 4.89dB |

3 General Information

3.1 General Description of EUT

| Manufacturer: | DONGGUAN TOGRAN ELECTRONICS TECHNOLOGY CO.,LTD | | | |
|-----------------------|---|--|--|--|
| Manufacturer Address: | 262 Shidan Rd.,3rd Inddustrial Area, Juzhou, Shijie, Dongguan, Guangdong | | | |
| EUT Name: | Wireless Mouse | | | |
| Model No.: | M006 | | | |
| Operation frequency: | 2408 MHz to 2474 MHz | | | |
| Number of channel: | 34 channels | | | |
| Modulation Type and | GFSK | | | |
| Antenna Type: | Integral antenna | | | |
| Data rate: | 1Mbps | | | |
| H/W No.: | A1 | | | |
| S/W No.: | 0.1 | | | |
| Antenna Gain: | 0 dBi | | | |
| Brand Name: | N/A | | | |
| Derivative model No.: | M002 | | | |
| Power Supply Range: | DC 3V(2*1.5V AA battery) | | | |
| Power Supply: | DC 3V from battery | | | |
| Power Cord: | N/A | | | |
| Signal Cable: | N/A | | | |
| Model description: | According to the declaration from the applicant, the electrical circuit design, layout, components used and internal wiring were identical for all models, with only difference being the model name. Therefore only one model M006 was tested in this report. | | | |

3.2 Test Location

All tests were performed at:

NTEK Testing Technology Co., Ltd

1/F, Building E, Fenda Science Park, Sanwei Community, Xixiang Street

Bao'an District, Shenzhen P.R. China

The FCC Registration No. of NTEK Testing Technology Co., Ltd is 238937.

4 Description of Test conditions

4.1 E.U.T. Operation

| Test Voltage: | DC 3V from battery(Using a new battery) |
|---------------------------------------|--|
| Temperature: | 20.0 -25.0 °C |
| Humidity: | 38-50 % RH |
| Atmospheric | 1000 -1010 mbar |
| Pressure: | |
| Test frequencies and frequency range: | According to the 15.31(m) Measurements on intentional radiators or receivers, other than TV broadcast receivers, shall be performed and, if required, reported for each band in which the device can be operated with the device operating at the number of frequencies in each band specified in the following table: |
| | According to the 15.33 (a) For an intentional radiator, the spectrum shall be investigated from the lowest radio frequency signal generated in the device, without going below 9 kHz, up to at least the frequency shown in the following table: |

Report No.: NTEK-2016DG0815466E

Number of fundamental frequencies to be tested in EUT transmit band

| Frequency range in which device operates | Number of frequencies | Location in frequency range of operation |
|--|-----------------------|--|
| 1 MHz or less | 1 | Middle |
| 1 MHz to 10 MHz | 2 | 1 near top and 1 near bottom |
| Mara than 10 MHz | 2 | 1 near top, 1 near middle and 1 |
| More than 10 MHz | 3 | near bottom |

Frequency range of radiated emission measurements

| Lowest frequency generated in the device | Upper frequency range of measurement | |
|--|--|--|
| 9 kHz to below 10 GHz | 10th harmonic of highest fundamental frequency or to 40 GHz, | |
| 9 kHZ to below to GHZ | whichever is lower | |
| At or above 10 GHz to below | 5th harmonic of highest fundamental frequency or to 100 GHz, | |
| 30 GHz | whichever is lower | |
| At or above 30 GHz | 5th harmonic of highest fundamental frequency or to 200 GHz, | |
| At or above 30 GHZ | whichever is lower, unless otherwise specified | |

Report No.: NTEK-2016DG0815466E

Note: The SMA antenna connector is soldered on the PCB board in order to perform conducted tests and this SMA antenna connector is listed in the equipment list.

6 Test Result

6.1 Antenna Requirement

Standard requirement

EUT Antenna

The antenna is Integral antenna and no consideration of replacement. The maximum gain of the antenna is 0 dBi.

Test result: The unit does meet the FCC requirements.

Band Edge

6.2 Field Strength of Fundamental& Field Strength of Unwanted Emissions&

Test Requirement: FCC Part15 C section 15.249

(a) Except as provided in paragraph (b) of this section, the field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following:

Report No.: NTEK-2016DG0815466E

| <u>'</u> | | |
|--------------------------------|---|--|
| Fundamental Frequency (MHz) | Field Strength of Fundamental (dBµV/m @ 3m) | Field Strength of Harmonics (dB _µ V/m @ 3m) |
| 902 to 928 | 94.0 | 54.0 |
| 2400 to 2483.5 | 94.0 | 54.0 |
| 5725 to 5875 | 94.0 | 54.0 |
| 24000 to 24250 | 108.0 | 68.0 |

(d) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in Section 15.209, whichever is the lesser attenuation.

Limits: The fundamental frequency rang is in the frequency band of the EUT is 2408

MHz ~ 2474 MHz

The limit for AVG field strength $dB_{\mu}V/m$ for the fundamental frequency = 94.0

 $dB\mu V/m$.

The limit for Peak field strength $dB\mu V/m$ for the fundamental frequency =

114.0 dB_uV/m.

No fundamental is allowed in the restricted bands.

The limit for AVG field strength $dB_{\mu}V/m$ for the harmonics and other above

1G frequencies = $54.0 \text{ dB}\mu\text{V/m}$.

The limit for Peak field strength dB_µV/m for the harmonics and other above

1G frequencies = $74.0 \text{ dB}_{\mu}\text{V/m}$.

Test Method: ANSI C63.10: Clause 6.4, 6.6 and 6.7 for Field Strength of Fundamental&

Field Strength of Unwanted Emissions

ANSI C63.10: Clause 6.9.2 for Band Edge

Status Pre-test the EUT in continuous transmitting mode with setup as stand-alone

in X, Y, Z threes axes, found the worst case is X axes and report the data.

Measurement Distance:

3m (Semi-Anechoic Chamber)

Frequency range 9 kHz – 25 GHz for transmitting mode.

Test instrumentation resolution bandwidth

9 kHz (9 kHz - 30 MHz), 120 kHz (30 MHz - 1000 MHz), 1 MHz (1000 MHz -

25 GHz)

Detector: For PK and QP value:

RBW = 1 MHz for $f \ge 1$ GHz, 100 kHz for f < 1 GHz

Report No.: NTEK-2016DG0815466E

 $\mathsf{VBW} \geq \mathsf{RBW}$

Sweep = auto

Detector function = peak

Trace = max hold

For AV value:

RBW = 1 MHz for $f \ge 1$ GHz,

VBW =10 Hz

Sweep = auto

Detector function = peak

Trace = max hold

Test Procedure:

1)9 kHz to 30 MHz emissions:

For testing performed with the loop antenna, testing was performed in accordance to ANSI C63.10. The centre of the loop was positioned 1 m above the ground and positioned with its plane vertical at the specified distance from the EUT, During testing the loop was rotated about its vertical axis for maximum response at each azimuth and also investigated with the loop positioned in the horizontal plane.

Report No.: NTEK-2016DG0815466E

2)30 MHz to 1 GHz emissions:

For testing performed with the bi-log type antenna, testing was performed in accordance to ANSI C63.10. The measurement is performed with the EUT rotated 360°, the antenna height scanned between 1m and 4m, and the antenna rotated to repeat the measurement for both the horizontal and vertical antenna polarizations.

3)1 GHz to 25 GHz emissions:

Test site with RF absorbing material covering the ground plane that met the site validation criterion called out in CISPR 16-1-4:2007 was used to perform radiated emission test above 1 GHz.

For testing performed with the horn antenna, testing was performed in accordance to ANSI C63.10. The measurement is performed with the EUT rotated 360°, the antenna height scan between 1m and 4m, and the antenna rotated to repeat the measurement for both the horizontal and vertical antenna polarizations.

For the radiated emission test above 1GHz:

Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.

Test Configuration:

1) 9 kHz to 30 MHz emissions:

2) 30 MHz to 1 GHz emissions:

3) 1 GHz to 25 GHz emissions:

The field strength is calculated by adding the Antenna Factor, Cable Loss & Per-amplifier. The basic equation with a sample calculation is as follows:

Final Test Level = Receiver Reading + Antenna, Factor + Cable Loss - Preamplifier Factor

And according 15.35(a)

15.35(a) On any frequency or frequencies below or equal to 1000 MHz, the limits shown are based on measuring equipment employing a CISPR quasi-peak detector function and related measurement bandwidths, unless otherwise specified. The specifications for the measuring instrument using the CISPR quasi-peak detector can be found in Publication 16 of the International Special Committee on Radio Interference (CISPR) of the International Electrotechnical Commission. As an alternative to CISPR quasi-peak measurements, the responsible party, at its option, may demonstrate compliance with the emission limits using measuring equipment employing a peak detector function, properly adjusted for such factors as pulse desensitization, as long as the same bandwidths as indicated for CISPR quasi-peak measurements are employed.

Report No.: NTEK-2016DG0815466E

Note: For pulse modulated devices with a pulse-repetition frequency of 20 Hz or less and for which CISPR quasi-peak measurements are specified, compliance with the regulations shall be demonstrated using measuring equipment employing a peak detector function, properly adjusted for such factors as pulse desensitization, using the same measurement bandwidths that are indicated for CISPR quasi-peak measurements.

According to 15.35 (b) Unless otherwise specified, on any frequency or frequencies above 1000 MHz, the radiated emission limits are based on the use of measurement instrumentation employing an average detector function. Unless otherwise specified, measurements above 1000 MHz shall be performed using a minimum resolution bandwidth of 1 MHz. When average radiated emission measurements are specified in this part, including average emission measurements below 1000 MHz, there also is a limit on the peak level of the radio frequency emissions. Unless otherwise specified, e.g., see §§ 15.250, 15.252, 15.255, and 15.509-15.519 of this part, the limit on peak radio frequency emissions is 20 dB above the maximum permitted average emission limit applicable to the equipment under test. This peak limit applies to the total peak emission level radiated by the device, e.g., the total peak power level. Note that the use of a pulse desensitization correction factor may be needed to determine the total peak emission level. The instruction manual or application note for the measurement instrument should be consulted for determining pulse desensitization factors, as necessary.

7.2.1 Duty cycle measurement:

Report No.: NTEK-2016DG0815466E

7.2.2 Radiated Emissions Test Data

9 kHz~30 MHz Field Strength of Unwanted Emissions. Quasi-Peak Measurement

The measurements with active loop antenna were greater than 20dB below the limit, so the test data were not recorded in the test report.

30 MHz~1 GHz Field Strength of Unwanted Emissions. Quasi-Peak Measurement

Remark:

1). The field strength is calculated by adding the Antenna Factor. Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading + Antenna Factor + Cable Loss –Preamplifier Factor.

- 2). As shown in Section, for frequencies above 1000 MHz. the above field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.
- 3). The test only perform the EUT in transmitting status since the test frequencies were over 1GHz only required transmitting status.
- 4). For Radiated Emissions fall in the restricted bands (2400MHz is worse case than 2390MHz and report it as above), which set out in Section 15.205 Restricted bands.

Also there is not any other emission which falls in restricted bands can be detected and reported.

Test result: The unit does meet the FCC requirements.

6.3 Occupied Bandwidth

Test Requirement: FCC Part 15 C section 15.215

(c)Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§ 15.217 through 15.257 and in Subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under

Report No.: NTEK-2016DG0815466E

which the equipment is operated.

Test Method: ANSI C63.10: Clause 6.9.1

Operation within the band 2408 MHz to 2474 MHz

Method of A small sample of the transmitter output was fed into the Spectrum

measurement: Analyzer and the attached plot was taken.

Test in the frequency 2408MHz (20 dB bandwidth)

Test in the frequency 2440MHz (20 dB bandwidth)

Test in the frequency 2474MHz (20 dB bandwidth)

6.4 Conducted Emissions at Mains Terminals 150 kHz to 30 MHz

Test Requirement: FCC Part 15 C section 15.207

Test Method: ANSI C63.10: Clause 6.2

Frequency Range: 150 kHz to 30 MHz

Detector: Peak for pre-scan (9 kHz Resolution Bandwidth)

Test Limit

Limits for conducted disturbance at the mains ports of class B

| Frequency Range | Class B Limit dB(μV) | | |
|-----------------|----------------------|----------|--|
| (MHz) | Quasi-peak | Average | |
| 0.15 to 0.50 | 66 to 56 | 56 to 46 | |
| 0.50 to 5 | 56 | 46 | |
| 5 to 30 | 60 | 50 | |

NOTE 1 The limit decreases linearly with the logarithm of the frequency in the range 0,15 MHz to 0,50 MHz.

EUT Operation:

Test in normal operating mode. For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage.

Report No.: NTEK-2016DG0815466E

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Test Configuration:

Report No.: NTEK-2016DG0815466E

Test procedure:

- 1. The mains terminal disturbance voltage test was conducted in a shielded room.
- 2. The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a $50\Omega/50\mu H + 5\Omega$ linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.
- 3. The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.
- 4. The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0,4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0,8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0,8 m from the LISN 2.

7.2.3 Measurement Data

Remark: Because the EUT employ battery power for operation and which do not operate from the AC power lines or contain provisions for operation while connected to the AC power lines. Measurements to demonstrate compliance with the conducted limits are not required for devices.
